

What you need to know about **methamphetamine**

Widespread availability of methamphetamine creates challenges for police, correctional staff, outreach, health and social service providers. This half-day workshop provides information about the impact it has on the brain, body and behaviour. Learn effective intervening strategies to help those experiencing paranoia and psychotic symptoms because of use.

Kerry Manthenga, Clinical Director of Community Services at Stonehenge Therapeutic Community offers expert insight about methamphetamine. For the past 15 years, Kerry has worked in mental and addictions and most recently, with the Wellington Guelph Drug Strategy, training care professionals about the impacts on individuals and systems of care.
